

Axie Duel — Sky Mavis Builders Program Pitch Deck

Submission: Mavis Hub: Greenlight + Builders Program candidacy **Author:** Anuar Issa · anuarissa117@gmail.com **Date:** May 2026 **Live:** <https://axie-duel.vercel.app>

This deck is the script + content blueprint for the PDF submitted to Sky Mavis. Convert with [Slidev](#) (`slidev export PITCH_DECK.md`) or copy slide-by-slide into Figma / Keynote / Slides.

10 slides. ~5 minutes spoken.

Slide 1 — Cover

Visual

- Logo Axie Duel (top center)
- Hero screenshot: PvE board mid-combat on mobile portrait — phase wheel lit, two Axes on field, hand visible
- Soft Ronin-purple gradient background

Body

Axie Duel

A tactical card game blending classic TCG depth with Axie's iconic universe and Web3 digital ownership.

Anuar Issa · anuarissa117@gmail.com · May 2026 Submission to Sky Mavis Builders Program & Mavis Hub: Greenlight

Speaker notes

- "Hi, I'm Anuar — I built Axie Duel solo over the past three intense months. It's live in production, plays from any browser, and turns any Axie NFT into a unique playable card."

- Pause for audience to scan the screenshot.
-

Slide 2 — The opportunity

Visual

- Three stacked rows of NFT thumbnails (sleeping zZz icons over them) → arrow → empty desk → arrow → engaged TCG players
- Right-side stat: "\$15B+ TCG genre · \$200M+/yr Master Duel"

Body

The opportunity

~3M+ Axies in circulation. The vast majority sit dormant outside the original Axie Infinity & Origins.

Card games are the #2 most lucrative gaming genre globally (\$15B+ market). Yu-Gi-Oh Master Duel alone generates \$200M+/year.

There is no production-grade tactical TCG in the Axie ecosystem that:

- *Uses Axie NFTs as playable cards with on-chain validation*
- *Onboards Web2 players (Google / Microsoft / Facebook) before requiring a wallet*
- *Runs on an authoritative server (anti-cheat by architecture, day one)*
- *Is genuinely mobile-first*

Speaker notes

- "Axie has 3+ million NFTs and a community that's already battle-tested. What it doesn't have is a deep TCG home for them. That's the gap."
 - Don't dwell — this is the setup.
-

Slide 3 — The product (the killer hook)

Visual

- 3-column diagram:

1. **Web2 funnel** (Google sign-in icon → starter deck illustrations Plant/Bird/Beast)
2. **Game core** (board screenshot — phase wheel + axes on field)
3. **Web3 deepening** (wallet icon → Axie NFT → algorithm arrow → unique card render)

Body

The product

A **tactical card battler** where Axies become collectible cards with stats, classes, and abilities.

Core game loop

- **Build** a 40–60 card deck (max 3 copies) — Axies, Spells, Traps
- **Battle** through 6 phases (Draw → Standby → Tactical → Combat → Tactical → End)
- **Win** by dropping opponent LP from 8000 → 0
- **Earn** Dust (off-chain) + AXS (on-chain post-partnership) → packs, tournament entries, deck slots

What makes it Axie-native — the killer hook

Every Axie NFT becomes a unique playable card via a deterministic algorithm.

1. Connect wallet (Waypoint MPC) → server reads **baLanceOf** on Ronin
2. Query Axie GraphQL Gateway → fetch the 6 parts (eyes / ears / mouth / horn / back / tail)
3. Apply our parts → ATK / DEF / Level / Effect lookup table
4. Server signs the card stats at match start = anti-cheat

Same Axie always → same card. No randomness. Audit-friendly. **3M+ Axies = 3M+ unique playable cards** with no manual art needed.

NFT-derived cards carry a **shimmering gold animated frame** plus an "NFT" badge in the corner — instantly distinguishable from Web2 starter / pack cards. Collectibility cue, not power cue.

Web 2.5 — the differentiating thesis

Web2 players sign in with Google, get a free starter deck, and can reach the top of the ladder — without spending, without a wallet. It just takes more effort and skill. **Web3 players** connect their Ronin wallet and unlock the NFT-as-card layer. **Both compete on the same ladder.** NFT cards are side-grades, not upgrades. F2P balance manifesto is non-negotiable and published in the repo.

Speaker notes

- "This is the slide that matters. Three things: deterministic NFT-to-card algorithm, Web 2.5 onboarding, F2P parity. If a Sky Mavis evaluator only remembers one slide, make it this one."
- Tease the live `/my-axies` demo: "I'll show you this in 30 seconds — it works right now."

Slide 4 — Built production-grade from day one

Visual

- Architecture diagram (3 layers):
 - Web** (Vercel — Next.js 14) ←WebSocket→ **Game-server** (Railway — Colyseus authoritative) ←HTTP→ **API** (Railway — Express + Prisma)
 - API** → Postgres 16 (Supabase) + Redis 7 (Upstash) + Ronin (Saigon, viem 2.x)
- Stat strip below: **22,800 LOC TypeScript · 155 LOC Solidity · 73+ tests green · 42+ Swagger endpoints · 31 cards · 15 Prisma models**

Body

Tech stack & architecture

Layer	Stack
Web	Next.js 14 (App Router) on Vercel · TypeScript strict
Game-server	Colyseus 0.16 authoritative · deterministic replay log · Schema 3.x

API	Express + Prisma + Postgres 16 + Redis 7
Auth	Google · Microsoft · Facebook · Ronin Waypoint (jose JWK verify) · EIP-4361 SIWE
Blockchain	viem 2.x · Saigon-ready (chainId 2021) · 3 Solidity contracts (OpenZeppelin)
Quality	73+ tests · CI/CD GitHub Actions · Swagger UI on /docs · pino structured logging

Live infrastructure:

- <https://axie-duel.vercel.app>
- <https://axie-api-production.up.railway.app>
- <wss://axie-game-prod.up.railway.app>

Speaker notes

- "Built solo, but built like a team would. TypeScript strict, real tests, CI on every push, three deployed services."
- Mention: "Colyseus authoritative server means the client sends *intentions*, the server validates with Zod and decides outcomes. No client-side cheating possible."
- "Smart contracts are written and audited internally — pending deploy on Saigon, which we'd love to do with Sky Mavis guidance for testnet faucet provisioning."

Slide 5 — Live demo highlights

Visual

- 2x2 screenshot grid (high-res):
 1. Dashboard mobile (3 PvE difficulty cards visible — Rookie/Veteran/Master)
 2. Battle screen mid-combat (axies on field + phase wheel)
 3. Deck builder with magnifier (lupa) preview
 4. [/my-axies](#) — Axie NFTs rendered as unique cards with **animated gold frame** (THE HOOK)

Body

What's live today (playable beta)

-  **Onboarding**: Google sign-in → starter pick (Plant / Bird / Beast) → forced 5-slide tutorial
-  **PvE ladder**: 3 difficulties (Rookie / Veteran / Master) — bot AI uses class advantage logic
-  **Deck builder**: 31 cards, 40–60 validation, max 3 copies, mobile lupa preview
-  **Daily quests**: WIN_PVE / PLAY_GAMES with atomic claim
-  **Wallet linking (auth scaffolding)**: Waypoint MPC + manual SIWE flow coded — Phase 2 to enable
-  **Mobile-first UX**: tested on Samsung Internet, Safari iOS, Chrome Android
-  **Match persistence**: deterministic replay log (cap 10k entries) for audit & analytics
-  **/my-axies page**: live Ronin address → real Axies as cards · or **Demo mode** with 5 preset Axies (no wallet required). NFT cards rendered with shimmering gold frame + NFT badge.
-  **Tournaments**: bracket + prize distribution code shipped; **disabled button visible on dashboard** as Phase 2 marker — opens when PvP ladder ships

 **5-min walkthrough video**: [YouTube unlisted link]

Speaker notes

- "Right now, no signup needed: visit **/my-axies** and click Demo Mode — you see five Axies rendered as unique cards in two seconds."
- "Or paste any Ronin address and we fetch their real Axies live from the GraphQL gateway."
- "Phase wheel, hand limit discard, surrender confirm modal — every TCG-genre staple is here."

Slide 6 — Sky Mavis ecosystem alignment

Visual

- 6-row checklist table; left column = Sky Mavis pillar, right column = how Axie Duel hits it.

- Footer strip with IP-respect note.

Body

Aligned with Sky Mavis pillars

<i>Sky Mavis Pillar</i>	<i>How Axie Duel delivers</i>
Ronin-first	viem 2.x · Saigon chainId 2021 · 3 contracts ready to deploy
AXS demand sinks	Pack opening · deck slots · tournament entry: 90 % players / 5 % BURN / 5 % game treasury
Increase Axie utility	Deterministic parts → unique card algorithm: 3M+ Axies → 3M+ playable cards. Rare parts → distinctive effects → marketplace pricing premium justified by gameplay diversity , not pay-to-win
Web2-first onboarding	Google / MS / Facebook day 1 · Waypoint MPC for wallet linking later
Community-driven	Open-source repo · Swagger docs public · daily quests · public leaderboard
Mobile-first	Responsive desktop + mobile · landscape battle layout · 9+ mobile-specific iterations

IP respect:

- README + UI disclaimer: "Fan-made project. Not officially affiliated with Sky Mavis."
- Original SVG card art — no copied Axie assets
- Working title — open to rename on partnership terms ("Lunacian Duel" / "Origins Duel" / etc.)
- ERC-721 contract mints **game cards** (Spells / Traps), NOT representations of Axie NFTs. Axies are read-only inputs.

Speaker notes

- "Every pillar in your public Builders Program rationale, we hit. The 90 / 5 / 5 split is the headline: every tournament entry routes 90 % to players, 5 % to permanent burn, 5 % to a transparent game treasury that funds content and audits. Direct deflationary pressure plus sustainable runway."

- "On IP: we're transparent, we use only public APIs, no copied art, name is open to change."

Slide 7 — Roadmap (12 months post-acceptance)

Visual

- Horizontal Gantt-style timeline, 4 quarters, with milestone bars

Body

12-month roadmap with Sky Mavis support

Q1 (Month 1–3) — Partnership integration

- Deploy 3 smart contracts to **Saigon testnet** · audited
- Live Axie GraphQL integration polish · scale-test against real wallets
- Tutorial guided match (already designed in Block 3)
- Greenlight community feedback iteration

Q2 (Month 4–6) — Mainnet + economy

- Migrate to **Ronin mainnet**
- On-chain AXS economy (real burns + rewards on tournaments)
- First 100 Axie-NFT-cards mintable as ERC-721 (with stats from parts)
- Public sponsored tournaments

Q3 (Month 7–9) — Content + esports

- 100+ new cards (Mech / Dawn / Dusk class expansions)
- Ranked seasons with leaderboards
- First sanctioned Sky Mavis tournament (collab branding)

Q4 (Month 10–12) — Scale

- Team grows: 1 → 3-4 (backend, frontend, game design, art)
- Mavis Hub permanent listing
- Mobile apps (PWA → wrapper for App Store / Google Play)
- Sky Mavis revenue split kicks in

Speaker notes

- "We're realistic: solo dev today, but the goal is to use the grant to onboard a game designer, an artist, and a community manager."
- "Q1 milestones are concrete enough to be measurable in the first review cycle."

Slide 8 — Tournament economy & deflationary design

Visual

- 3-way flow diagram (ASCII or SVG): User pays AXS/SLP entry → splits into **90 % players** (top 3 prize tiers) / **5 % BURN** (perma to `0x...dEaD`) / **5 % GAME TREASURY** (multisig — funds content + audits + F2P prize seeding). Public on-chain ledger annotation underneath.

Body

Tournament-first deflationary economy

Tournaments — the core AXS/SLP demand sink

- **Entry fee:** paid in **AXS** (preferred) or **SLP** (legacy token Sky Mavis wants reduced from circulation)
- **90 % of pot** → **players** (top 3, 60 / 25 / 15)
- **5 %** → **permanent BURN** (sent to `0x000...dEaD`)
- **5 %** → **game treasury** (multisig — funds content drops, audits, F2P-tournament prize seeding)

- **Result:** every tournament = real, auditable deflationary pressure on AXS + SLP supply AND a transparent operating fund

Why split the non-prize half (not pure 10 % burn)?

- Pure burn looks great on tokenomics but leaves the project underfunded
- The 5 % treasury keeps the game alive: content cadence, security audits, F2P tournament seeding, esports sponsorship
- Treasury is a transparent multisig — auditable on Ronin, not a black box
- Burn share stays meaningful: at scale this is **tens of thousands of AXS burned per month**

Why this matters to Sky Mavis

- Direct alignment with the **#1 stated pillar: Increase AXS demand sinks**
- **Burns SLP** — explicitly addresses the legacy-token oversupply problem
- **Skill-rewarded payouts** (NOT NFT-rewarded) → counters pay-to-win narrative
- **Public on-chain ledger for both burn and treasury** = transparency by default

Other revenue streams + sinks

1. **Pack sales** in AXS — 25 % of pack revenue burned
2. **Premium Battle Pass** (cosmetic only) — 100 % of revenue burned (no power gating)
3. **Deck slot expansions** — small AXS burn per slot
4. **Mavis Marketplace royalty** on Axie-NFT-card secondary trades (flows to Sky Mavis)

Revenue split (per Sky Mavis Builders Program guidelines)

- \$0 – \$10k / month: 0 % to Community Treasury
- \$10k – \$50k / month: 20 % to Community Treasury
- \$50k+ / month: 25 % to Community Treasury
- Remainder: development + team

Speaker notes

- "This is the answer to: 'how does this benefit the broader Axie ecosystem?'"
- "We don't just create demand — we destroy supply *and* fund our own runway transparently. Every match marginally shrinks AXS supply and adds to a multisig treasury our community can audit."
- "Battle Pass is cosmetic only. F2P never feels gated."
- "The 5 % game treasury is what makes this sustainable beyond an initial grant — it's our long-term operating budget."

Slide 9 — Team & commitment

Visual

- Headshot or GitHub avatar of Anuar (left)
- Right column: bio bullets + GitHub stats placeholder
- Footer: "Looking to add" cards (3 future hires)

Body

The team

Anuar Issa — Founder, Lead Engineer

- **Full-stack TypeScript engineer** with focus on real-time multiplayer + Web3 integration
- Built Axie Duel solo: full architecture, code, testing, deployment
- **3 months intense execution** — core idea developed for longer; AI tooling accelerated build velocity
- GitHub: github.com/anuarissa
- Email: anuarissa117@gmail.com

Why I'm building this

- Long-time Axie player & holder

- *Saw the gap: Axie NFT utility outside Origins is largely unexplored*
- *TCG genre is proven — Master Duel \$200M/yr, Hearthstone, Magic Arena. Axie has the IP and community to win this category.*

Looking to add (post-grant)

- **Game designer** (*cards balance + meta + content cadence*)
- **Pixel artist** (*Axie-style card frames + animations*)
- **Community manager** (*tournaments + Discord moderation*)

Speaker notes

- "I'm transparent: solo dev. The grant unlocks the team that takes this from MVP to production-scale."
 - "I'm not asking Sky Mavis to take a leap of faith on someone with a slide deck. The product is live, tests are green, and the algorithm is open-source and auditable."
-

Slide 10 — The ask

Visual

- 3-column "ask" CTA block
- Bottom strip: live URLs + contact

Body

What we need from Sky Mavis

1. Acceptance to the Builders Program

- **Minimum \$10k AXS grant** *to fund 3 months of focused development*
- *Engineering guidance for **Saigon deployment** + audit prep*

2. Mavis Hub: Greenlight listing

- Community visibility for early playtest cohort (1k–10k players)
- Voting → permanent Mavis Hub listing

3. API access tier upgrade

- Higher rate limits for **Axie GraphQL Gateway** (the public tier limits us at scale)
 - Access to internal developer tools / Cookbook resources
-

What we offer Sky Mavis

- A **production-grade product** ready to onboard the next 100k Axie players via the TCG genre
 - **Real, deflationary Axie NFT utility** that's engaging, not pay-to-win
 - **Mobile-first** = expanded TAM beyond the desktop-only original Axie audience
 - **Open-source-friendly monorepo** — risk-mitigated for Sky Mavis (others can fork if needed)
 - **Track record:** 22,800 LOC + 73+ tests + 12+ production deploys in 3 months — proven ship velocity
-

Live now: <https://axie-duel.vercel.app> · **Repo:** github.com/anuarissa/axie-duel **Email:** anuarissa117@gmail.com · **Discord:** anuarissa · **Twitter:** @issayarur

Speaker notes

- "We're not asking for the moon. \$10k AXS, technical guidance, an API tier. We deliver the next major TCG home for Axie holders."
 - "Thanks for your time. Happy to walk through the live product right now if there's interest."
-

Appendix — Anticipated FAQ (back-pocket)

Q: How will you monetize? Tournament entries (AXS/SLP, 5 % burn + 5 % game treasury), pack sales, cosmetic Battle Pass, deck-slot expansions, marketplace royalties on Axie-NFT-cards. F2P retention model proven by Hearthstone (~30 % of F2P become paying within 90 days).

Q: When mainnet? Q2 of the post-acceptance roadmap. Three contracts are written and audited internally; we want Sky Mavis review before deployment.

Q: How do you balance NFT vs F2P? Documented publicly in [docs/F2P_BALANCE_MANIFESTO.md](#) . NFT cards are side-grades, not upgrades. Stat ranges overlap. Quarterly meta reviews + nerfs if any NFT card hits >40 % of top-10 decks.

Q: Why not just build on Axie's existing chain integrations? We do — viem 2.x for Ronin reads, Axie GraphQL Gateway for parts, Waypoint for auth. We don't replace Axie infrastructure; we consume it as a TCG layer on top.

Q: What's stopping someone else from building this? Three months of execution velocity, 22k LOC, and a deterministic-algorithm spec already worked out. We're not racing on the moat — we're racing on the partnership.

Q: What's the IP risk? Public Axie APIs are open. We use no copied art. Title is provisional and subject to renaming. Disclaimer is on every page. Game is built to run alongside official Axie products, not against them.
