

Video walkthrough script — 5 minutes

Target: a single, unedited (or lightly edited) 5-minute screen recording uploaded to YouTube as **unlisted**, linked from the pitch deck and the cold email.

Tone: confident, calm, fast, no filler. Speak as if explaining to a senior dev who already knows TCGs but hasn't seen Axie Duel.

Recording setup:

- 1080p OBS Studio at 30 fps minimum (see [HOWTO_RECORD_VIDEO.md](#) for setup details)
- Mic: any decent USB or headset mic; no music in background
- Browser: Chrome full-screen, no extensions visible, **test account already logged in with starter deck already picked** — you DO NOT show the login or starter-pick flow during the recording
- Use the production URL: <https://axie-duel.vercel.app>

Timing breakdown (NEW STRUCTURE)

Time	Section	Goal
00:00 – 00:35	1. Project intro + Web 2.5 thesis	Frame the bet: "Web 2.5 game, F2P wins competitively, NFTs add flavor not power"
00:35 – 01:10	2. Onboarding overview (mentioned, not shown)	Acknowledge login + starter pick exist, fast — vamos pa'lante
01:10 – 02:30	3. Core loop — PvE match (Rookie)	Show the game actually playing — phase wheel, combat, win
02:30 – 03:15	4. Deck depth + Packs / Sobres economy	F2P loop: free + paid packs, same competitive ceiling
03:15 – 04:15	5. Web 3 layer — /my-axies + NFT gold frame ★	The killer demo — moved to the end so it lands hardest
04:15 – 04:45	6. Future roadmap (Tournaments, Ronin auth, mainnet)	Show the disabled Tournaments button + Phase 2 ambition

04:45 – 05:00	7. Close + CTA	URLs, repo, email, Builders Program ask
------------------	----------------	---

Spoken script (with screen actions in brackets)

0:00 – 0:35 — Project intro + Web 2.5 thesis

[On screen: Chrome already open at axie-duel.vercel.app homepage]

"Hi, I'm Anuar. This is **Axie Duel** — a tactical card game built for the Axie Infinity ecosystem.

The thesis is simple: **Axie Duel is a Web 2.5 game.**

[Click into [/dashboard](#)]

Web 2 players sign in with Google in five seconds, get a free competitive starter deck, and can climb all the way to the top of the ladder — without spending a dollar, without owning a single NFT. It just takes more effort, more skill, more time. The free-to-play promise is non-negotiable.

Web 3 players connect their Ronin wallet, and their Axie NFTs become unique playable cards in this game, derived from each NFT's parts.

Both sides compete on the same ladder. **NFT cards are side-grades, not upgrades.** This is our F2P balance manifesto, published openly in the repo.

Built solo, three months intense, in production right now. Let me walk you through it."

0:35 – 1:10 — Onboarding overview (mentioned, not shown)

[On screen: dashboard, with avatar / level / Dust / AXS counters visible, decks panel on the left, daily quests on the right]

"I'm logged in on a test account. **Onboarding is:**

- Sign in with Google — five seconds.
- Pick a starter deck — Plant, Bird, or Beast. All three are competitive in F2P hands.
- Five-slide forced tutorial — phases, LP bar, hand limits, win condition.

*Cold visitor to first match: under two minutes. **No wallet required, ever.***

*In the near future, **Ronin Waypoint** and **Ronin Wallet** will be added as auth options — for players who want to bring their NFTs in from day one. Today, just Google."*

[Briefly hover over the "Connect Ronin Wallet" button in the header to show it exists but isn't required]

1:10 – 2:30 — Core loop: PvE match (Rookie)

[Scroll to the PvE ladder section — show the three tiers: Rookie / Veteran / Master]

*"Core game loop. PvE ladder has three difficulties: **Rookie, Veteran, Master**. Bot AI scales with each — Master uses class advantage logic and tribute economy. Today I'll play Rookie to show the basics fast."*

[Click "Rookie" → match starts]

"Six-phase turn: Draw, Standby, Tactical, Combat, Tactical, End. Industry-standard pacing for TCGs."

[Play a card from hand into the field]

Cards drop in Tactical. The bot reacts.

[Enter Combat phase]

Combat math: ATK minus DEF, with class triangle giving ± 15 percent shifts. Beast versus Plant — that's a class advantage, the damage is amplified.

[Win the match]

Win condition: drop opponent LP from 8000 to 0. Rewards: 50 XP, 10 Dust, plus daily-quest progress.

*Critical: **this is an authoritative server**. The client sends intentions, the Colyseus game-server validates them with Zod schemas, the server alone decides outcomes. Anti-cheat by architecture, day one."*

2:30 – 3:15 — Deck depth + Packs / Sobres economy

[Navigate back to dashboard → click "🔧 Build deck"]

"Deck building lives here. **31 cards** in the beta — 20 Axies, 6 Spells, 5 Traps. 40 to 60 cards per deck, max 3 copies each. Classic TCG rules.

[Briefly show the deck builder with the magnifier preview, then navigate to /store]

Card acquisition is the heart of the F2P loop. Players power up their decks via **booster packs**:

[On the /store page, point to the three pack types]

- **Free packs** — earned over time through daily quests, ladder wins, and tournament participation.
- **Paid packs** — bought with AXS or in-game Dust for players who want to progress faster.

Either path leads to the **same competitive ceiling**. Money buys speed, not power. The free-to-play player gets to top ladder, just slower. This is the contract with the player.

NFT cards are different. They don't come from packs. They come from your actual Axie NFTs on Ronin, via a deterministic algorithm. Let me show you that next — this is the killer feature."

3:15 – 4:15 — Web 3 layer: **/my-axies** + NFT gold frame ★ THE KILLER DEMO

[Navigate to **/my-axies**]

"The Web 3 layer. This is where Axie NFTs become real, mechanically-relevant cards.

The algorithm: connect Ronin wallet → server reads **balanceOf** on-chain → queries the Axie GraphQL Gateway for each Axie's six parts (eyes, ears, mouth, horn, back, tail) → applies a deterministic lookup table → renders a unique playable card with stats, class, level, and an effect.

Same Axie always produces the same card. **No randomness.** Audit-friendly. The card is server-signed at match start, so the client cannot modify stats.

[Click 'Run demo' — 5 cards render with animated gold frames]

Five Axies, five unique cards. Beast, Plant, Bird, Bug, Aqua.

Notice the gold animated frame on every card. That's our visual identity for **NFT-derived cards**. Web 2 starter cards and earned pack cards have neutral frames. **NFT**

cards have this shimmering gold border plus the NFT badge top-left. At a glance, a player knows which cards in their collection are NFT-backed.

Collectibility cue, not power cue. Stats stay within the same band as F2P cards. The gold is identity, not advantage.

[Hover over one card to show the effect description]

Three million plus Axies in circulation. Three million plus potentially unique playable cards. Zero manual art required.

Live mode supports any Ronin address — paste a wallet, we hit the GraphQL gateway and render their real Axies. The Demo Mode you see uses preset Axies so this works without a wallet for the evaluator."

4:15 – 4:45 — Future roadmap (organized future)

[Navigate back to dashboard → highlight the disabled "🏆 Tournaments [Phase 2]" button]

"What's next — three concrete fronts, in order:

One — Tournaments. You see this disabled gold button on the dashboard. Ships in Phase 2 when the PvP ladder goes live. Entry in AXS or SLP, split **90 percent to players, 5 percent permanent burn, 5 percent to a transparent multisig game treasury** that funds content, audits, and free-tournament prize seeding. Sky Mavis pillar one is AXS demand sinks — this is direct, on-chain, auditable deflationary pressure, plus a sustainable runway.

Two — Ronin auth. Today: Google sign-in. Next: **Waypoint MPC plus EIP-4361 SIWE.** Both are already coded in the repo, awaiting partnership to ship.

Three — Mainnet contracts. Three Solidity contracts using OpenZeppelin — ERC-721 for game cards, ERC-20 capped for soft currency, AXS mock for testing. **Saigon-ready, deploy script committed.** Holding off on broadcast until Sky Mavis guides the audit track and Saigon faucet provision."

4:45 – 5:00 — Close + CTA

[Final title card: dark background, three URLs + email]

"That's Axie Duel. Web 2.5, production grade, three deployed services, seventy-three tests green, public repo.

Live at **axie-duel.vercel.app**. Repo at **github.com/anuarissa/axie-duel**. Submission to the **Sky Mavis Builders Program**.

Excited to talk about partnership. Thanks for watching."

Recording checklist

- ☐ Test account logged in BEFORE recording — starter pick + tutorial both completed (no forced redirects mid-video)
- ☐ Browser cleaned: no other tabs, no bookmarks bar, no extensions visible
- ☐ Notifications silenced (Win11 → Do Not Disturb / Focus Assist)
- ☐ Pre-record dry run to nail timing — first take is rarely the keeper
- ☐ Cursor highlight on (OBS sources → Display Capture → Properties → Capture Cursor: ON)
- ☐ Re-record any segment > 30 s of dead air or stumbling
- ☐ Hard cut total length to 5:00 — Sky Mavis evaluators will skim
- ☐ Add YouTube chapter markers matching the new timing breakdown

YouTube upload metadata

Title: Axie Duel – Sky Mavis Builders Program submission walkthrough (5 min)

Description (paste in YouTube):

Axie Duel is a Web 2.5 tactical card game where every Axie NFT becomes a unique playable card via a deterministic algorithm. Free-to-play players can reach the top of the ladder without spending – NFT cards add flavor, collectibility, and a distinctive gold frame, not raw power.

- Live: <https://axie-duel.vercel.app>
- Repo: <https://github.com/anuarissa/axie-duel>
- Pitch deck + docs in the repo

Submission to the Sky Mavis Builders Program (May 2026).

00:00 Project intro + Web 2.5 thesis
00:35 Onboarding overview (Google + starter – mentioned, not shown)
01:10 Core loop – PvE match on Rookie difficulty
02:30 Deck building + booster packs economy (free vs paid)
03:15 Web 3 layer – /my-axies + NFT gold frame ★
04:15 Future roadmap – Tournaments / Ronin auth / mainnet contracts
04:45 Close + CTA
