

Video walkthrough script — 5 minutes

Target: a single, unedited (or lightly edited) 5-minute screen recording uploaded to YouTube as **unlisted**, linked from the pitch deck and the cold email.

Tone: confident, calm, fast, no filler. Speak as if explaining to a senior dev who already knows TCGs but hasn't seen Axie Duel.

Recording setup:

- 1080p OBS or QuickTime, 30 fps minimum
 - Mic: any decent USB or headphone mic; no music in background
 - Browser: full-screen, no extensions visible, signed-in test account ready
 - Clear `localhost` → use the production URL: <https://axie-duel.vercel.app>
-

Timing breakdown

Time	Section	Goal
0:00 – 0:25	Opening hook	Set the stake — what is Axie Duel
0:25 – 1:15	The killer demo: <code>/my-axies</code>	Show the parts → card algorithm live
1:15 – 1:55	Onboarding flow	Google sign-in → starter deck → tutorial
1:55 – 3:00	Core loop: a PvE match	Phase wheel, hand, combat, win
3:00 – 3:45	Deck builder + catalog	Show depth
3:45 – 4:20	Tournaments + economy	The 90/10 burn loop
4:20 – 4:50	Tech under the hood	Swagger + repo + tests
4:50 – 5:00	Close + CTA	Where to find the project

Spoken script (with screen actions in brackets)

0:00 – 0:25 — Opening hook

"Hi, I'm Anuar. This is **Axie Duel** — a tactical card game where every Axie NFT becomes a unique playable card, automatically, via a deterministic algorithm.

Built solo over three months, live in production, and you don't need a wallet to try it. Let me show you the killer feature first."

[On screen: navigate to <https://axie-duel.vercel.app/my-axies>]

0:25 – 1:15 — The killer demo

[Click "Run demo" button]

"These five cards just rendered from preset Axie data. Each one was generated by reading the six parts of an Axie — eyes, ears, mouth, horn, back, tail — and running them through our parts → stats algorithm.

Same Axie input always → same card output. No randomness. The algorithm spec is open in the docs folder of the repo, so anyone — including a Sky Mavis evaluator — can audit it.

[Hover over a card] Note the class gradient, the rarity badge, the effect. The Beast Axie #5234 has 'imp' on horn → triggers an on-summon burn for 200 LP. The Plant has snail-shell on back → +500 DEF in defensive position.

[Click 'Live wallet'] If you connect a real Ronin wallet — paste an address — we hit the Axie GraphQL Gateway and fetch live Axies. Same algorithm, real NFTs."

1:15 – 1:55 — Onboarding flow

[Open in private window: <https://axie-duel.vercel.app>]

"Now the onboarding. This is where the Web 2.5 thesis lives.

[Show login page] Google, Microsoft, Facebook, plus Ronin Waypoint. Web2 player picks Google.

[Skip / show transition] First time → forced starter deck pick — Plant, Bird, or Beast. Lore-accurate, free, +50 Dust bonus.

[Show starter pick] Then a 5-slide forced tutorial covering the phases, the LP bar, the hand, and how to win.

Total time from cold visit to first match: under 2 minutes. No wallet ever required."

1:55 – 3:00 — Core loop: a PvE match

[Navigate to /play/pve?diff=novato]

"Core game loop. This is the dashboard PvE ladder — Novato, Avanzado, Experto. Pick Novato.

[Match starts] The phase wheel — Draw, Standby, Tactical, Combat, Tactical, End. Six phases per turn. Industry-standard pacing.

[Play a card from hand] Cards drop into Tactical. The bot reacts.

[Combat phase] Combat math: ATK minus DEF, modified by class triangle ($\pm 15\%$). Beast vs Plant = positive class advantage.

[Win the match] Win condition: drop opponent LP from 8000 to 0. Rewards: +50 XP, +10 Dust, daily-quest progress.

Authoritative server. Client sends intentions, server validates with Zod, server decides outcomes. No client-side cheating possible."

3:00 – 3:45 — Deck builder + catalog

[Navigate back to dashboard → click 'Build deck']

"Deck builder. 31 cards in the playable beta — 20 Axes, 6 Spells, 5 Traps. 40 to 60 cards per deck, max 3 copies per card.

[Click a card → magnifier shows] On mobile this is a tap-to-magnify; on desktop it's a hover preview. Card art, full effect text, class chip, rarity.

[Show catalog page briefly] Full catalog at /cards. Filterable by class, type, rarity.

Roadmap: 100+ cards in the first six months post-grant."

3:45 – 4:20 — Tournaments + economy

[Navigate to /tournaments or wherever brackets are]

"Tournaments. Single-elimination brackets with byes, prize distribution, automatic refunds on cancel.

[Show a bracket] Entry fee paid in AXS or SLP. 90 % goes to the prize pool. 10 % goes to a permanent burn address — every tournament removes AXS or SLP from circulation forever.

This is the direct AXS demand sink that aligns with Sky Mavis pillar #1.

Daily quests on the dashboard reward small AXS amounts so F2P players can earn entry fees over time. Skill-rewarded payouts, not NFT-rewarded."

4:20 – 4:50 — Tech under the hood

[Open <https://axie-api-production.up.railway.app/docs> in new tab]

"Quick tech tour. Swagger UI documents 42+ endpoints with example payloads. CI runs on every push to main; tests are 73+ green right now.

[Open repo on GitHub] Public monorepo. Turborepo + pnpm 9 + TypeScript strict. Three deployed services: Vercel for web, Railway for API and game-server.

[Open packages/contracts] Three Solidity contracts using OpenZeppelin: AXS off-chain ledger, ERC-20 capped, ERC-721 for game cards. Deploy script ready for Saigon — pending Sky Mavis guidance on testnet faucet provisioning.

[Briefly show docs/PARTS_ALGORITHM.md] The parts algorithm is fully documented and version-locked. v1 today, v2 planned post-mainnet."

4:50 – 5:00 — Close + CTA

"That's Axie Duel. Live now at axie-duel.vercel.app. Repo at github.com/anuarissa/axie-duel. Email anuarissa117@gmail.com.

Submitted to the Sky Mavis Builders Program. Excited to talk about partnership.

Thanks for watching."

Recording checklist

- ☐ Test account logged in BEFORE recording (don't record signup)
- ☐ Browser cleaned: no other tabs, no bookmarks bar, no extensions visible
- ☐ Notifications silenced (DND mode)
- ☐ Pre-record dry run to nail timing — first take is rarely the keeper
- ☐ Cursor highlight on (built-in OBS plugin or system setting)
- ☐ Re-record any segment > 30 s of dead air or stumbling
- ☐ Hard cut total length to 5:00 — Sky Mavis evaluators will skim
- ☐ Add YouTube chapter markers matching the timing breakdown above

Title: Axie Duel – Sky Mavis Builders Program submission walkthrough (5 min)

Description (paste in YouTube):

```
Axie Duel is a tactical card game where every Axie NFT becomes a unique playable card via a deterministic algorithm.
```

- ```
• Live: https://axie-duel.vercel.app
• Repo: https://github.com/anuarissa/axie-duel
• Pitch deck + docs in the repo
```

```
Submission to the Sky Mavis Builders Program (May 2026).
```

```
00:00 Opening hook
00:25 The killer demo (parts → card algorithm)
01:15 Onboarding flow (Web 2.5 – Google sign-in to first match)
01:55 Core game loop (PvE match)
03:00 Deck builder + catalog
03:45 Tournaments + 90/10 burn economy
04:20 Tech under the hood
04:50 Close
